

EFFICIENT ENERGY

TO MEET THE ENERGY NEEDS OF A CITY OF
1 MILLION PEOPLE FOR 1 WEEK YOU WOULD NEED:

EITHER

1 X  (250,000 TONNES OF OIL)

OR

20 X  (400,000 TONNES OF COAL)

OR

60 KG OF FUSION FUEL

What are the merits of fusion energy?

- abundant fuel- deuterium for millions of years and easily mined lithium for several hundreds of years
 - no CO₂ greenhouse gas emissions
 - no possibility of a “melt-down” or “runaway reactions”
 - no transport of radioactive materials
 - no long-lasting radioactive waste to create a burden on future generations
