

NO CO₂

BY 2020, EUROPE HAS TO REDUCE GREENHOUSE EMISSIONS BY 20%

FUSION DOES NOT EMIT ANY CO₂ GREENHOUSE GASES

1 KG OF OIL EMITS 2.3 KG OF CO₂

1 KG OF COAL EMITS 2.1 KG OF CO₂

EU Member States consume more than 1,725 million tonnes of oil every year at a cost of 500 billion Euros. By 2015, it is expected that European energy demand will grow to 1,900 million tonnes. Energy consumption results in 78% of EU CO₂ emissions which is a significant contributor to climate change. Fusion is part of the EU energy strategy 2020 aiming to deliver a sustainable, competitive and secure energy mix.
